## 1. Introduction

### 1.1. About this Manual

This manual is intended to provide the user with an overview of the board and benefits, complete features specifications, and set up procedures. It contains important safety information as well.

### 1.2. Feedback and Update to this Manual

To help our customers make the most of our products, we are continually making additional and updated resources available on the Boardcon website ([www.boardcon.com](http://www.boardcon.com) , [www.armdesigner.com](http://www.armdesigner.com)).

These include manuals, application notes, programming examples, and updated software and hardware. Check in periodically to see what's new!

When we are prioritizing work on these updated resources, feedback from customers is the number one influence, If you have questions, comments, or concerns about your product or project, please no hesitate to contact us at [support@armdesigner.com](mailto:support@armdesigner.com).

### 1.3. Limited Warranty

Boardcon warrants this product to be free of defects in material and workmanship for a period of one year from date of buy. During this warranty period Boardcon will repair or replace the defective unit in accordance with the following process:

A copy of the original invoice must be included when returning the defective unit to Boardcon. This limited warranty does not cover damages resulting from lighting or other power surges, misuse, abuse, abnormal conditions of operation, or attempts to alter or modify the function of the product.

This warranty is limited to the repair or replacement of the defective unit. In no event shall Boardcon be liable or responsible for any loss or damages, including but not limited to any lost profits, incidental or consequential damages, loss of business, or anticipatory profits arising from the use or inability to use this product.

Repairs make after the expiration of the warranty period are subject to a repair charge and the cost of return shipping. Please contact Boardcon to arrange for any repair service and to obtain repair charge information.

# 1 CM-MT6737 Introduction

## 1.1 Summary

CM-MT6737 is a Computer-on-Module powered by MediaTek MT6737 processor that integrates a 64-bit architecture and designed mainly for Android smartphones. The MT6737 module is coupled with 1GB RAM and 4GB eMMC and available with 3G/4G, GPS and WiFi/Bluetooth module with antennas. It can handle 13MP camera and allows for 1080p videos to be played at 30fps.

The CM-MT6737 runs Android7.0 and pins out media I/O including MIPI, as well as speaker, headphone, mic, and I2S.

The module is aimed at automotive, smart speaker, smart wear, and security monitoring.

## 1.2 CM-MT6737 Specifications

Item	Parameter	Specification
Mechanical properties	Size	60mm x 38mm x 2.2mm
	Weight	10.2g
	Package Type	Stamp hole (150pin)
Baseband	Processor architecture	ARM Cortex-A53 Quad-core 1.3GHz
	(U)SIM/SIM	Standard 6 PIN SIM card interface 3V SIM card and 1.8V SIM card
	RAM	On-board 1GB LPDDR, up to 3GB
	ROM	On-board 4GB eMMC up to 32GB
	USB	USB2.0
	Max power consumption	2.5W
	Voltage	DC 3.7V – 4.2V
	Operating Current	Peak current ≤1.3 A Normal working average current ≤ 680mA Normal working average current (no service) ≤75mA Standby current is about 3.3mA
Radio Frequency	GSM	B3/B8
	CDMA2000	EVD0 (BC0)
	UMTS	B1/B8
	TD-SCDMA	B34/B39
	LTE-FDD/ LTE-TDD	FDD: B1/B3/B5/B8 TDD: B38/B39/B40/B41(100M)
	Main antenna	Support
	Diversity receiving antenna	Support
	Antenna interface	Onboard copper shaft antenna IPEX MHF4 socket
Technical Standard	GPRS Type	Class B
	3GPP Protocol	R99, R5, R6, R7
	Operating System	Android 7.0
Environmental Characteristics	Operating Temperature	TBD
	Storage Temperature	TBD
	Humidity	5%~ 95%
Application	RAS dialing	Support
	Short message	Support
	Lock net	Support
	SIM READER	Support
	Upgrade	Support

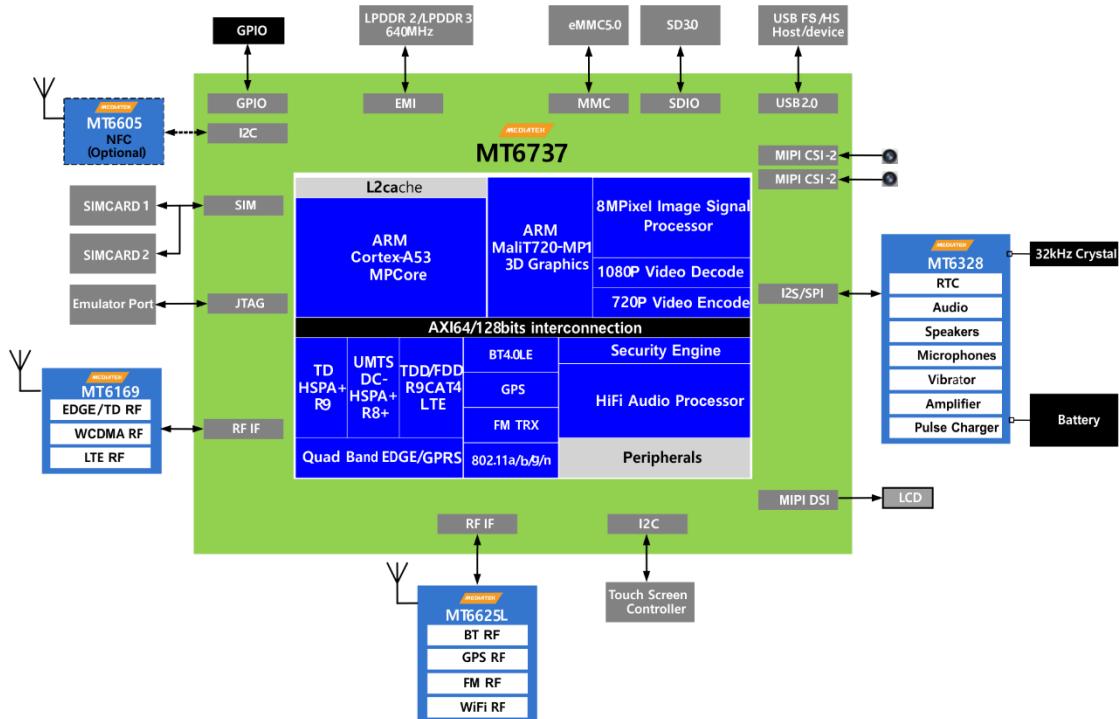

**Illustrate:**

1. The maximum power consumption is the average value measured at the maximum transmit power;
2. The peak current, normal working average current and normal working (no service) current value in the working current are the maximum values tested in the maximum power consumption mode. The standby current is the current in the SLEEP mode.

## 1.5 The Development Board for Application

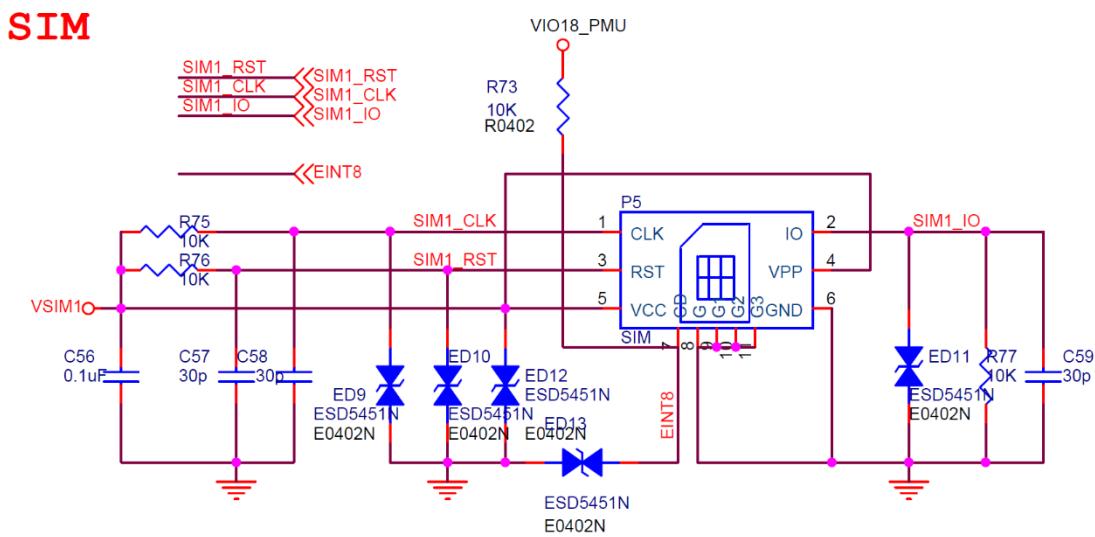

## 2 Hardware Design Guide

### 2.1 Peripheral Circuit Reference

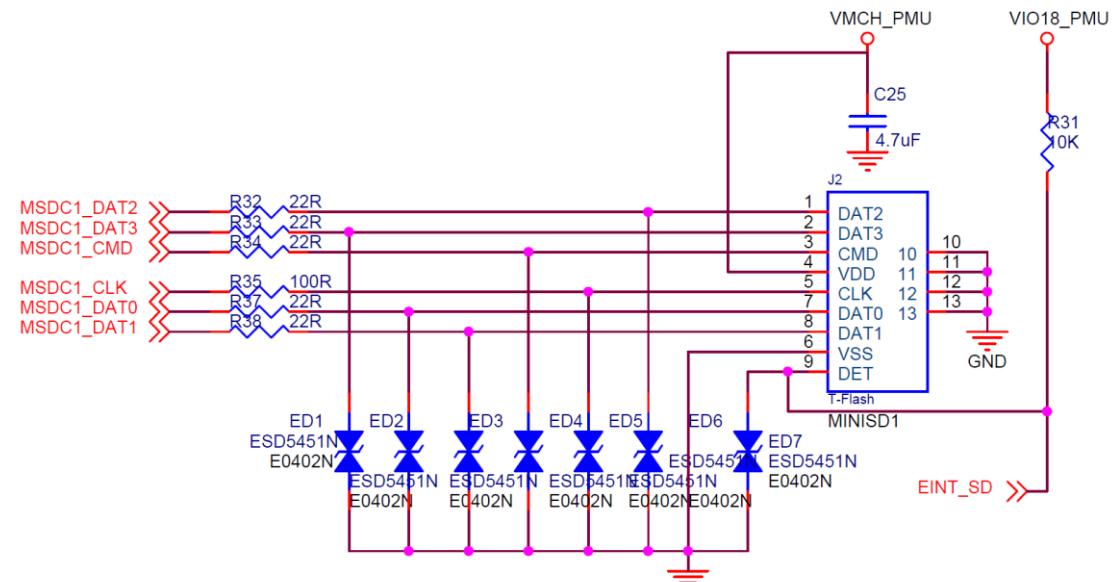

#### 2.1.1 SIM Card

The M6038 HSDPA module integrates a SIM card interface that compliant with ISO7816-3 standard, and supports automatically detect 3.0V/1.8V SIM cards.

#### 2.1.2 SD Card

SD card is detected by EINT\_SD.

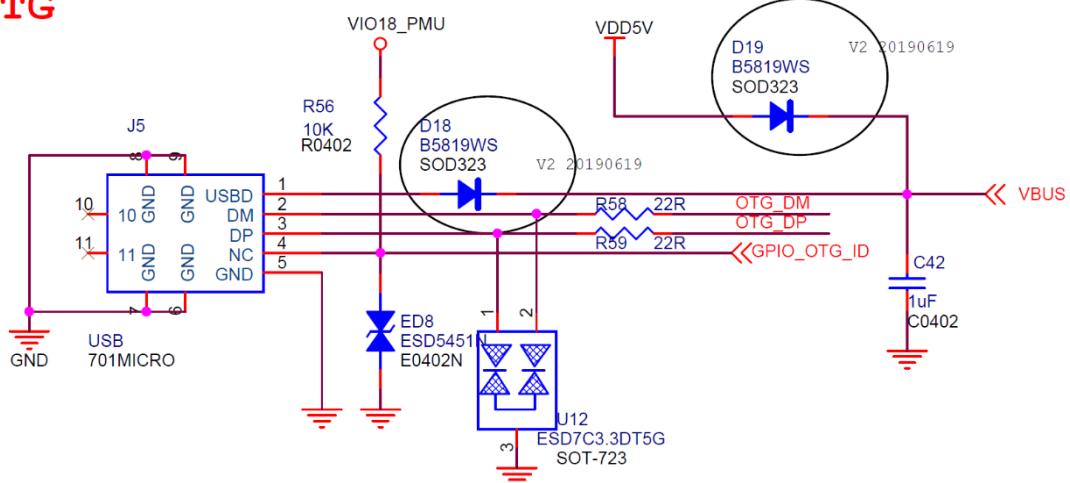

### **2.1.3 USB2.0 OTG**

The USB bus is mainly used for data transmission, software upgrade, and module program detection.

USB2.0 OTG supports OTG master and slave modes, allows external expansion to HOST, and supports full-speed and high-speed modes.

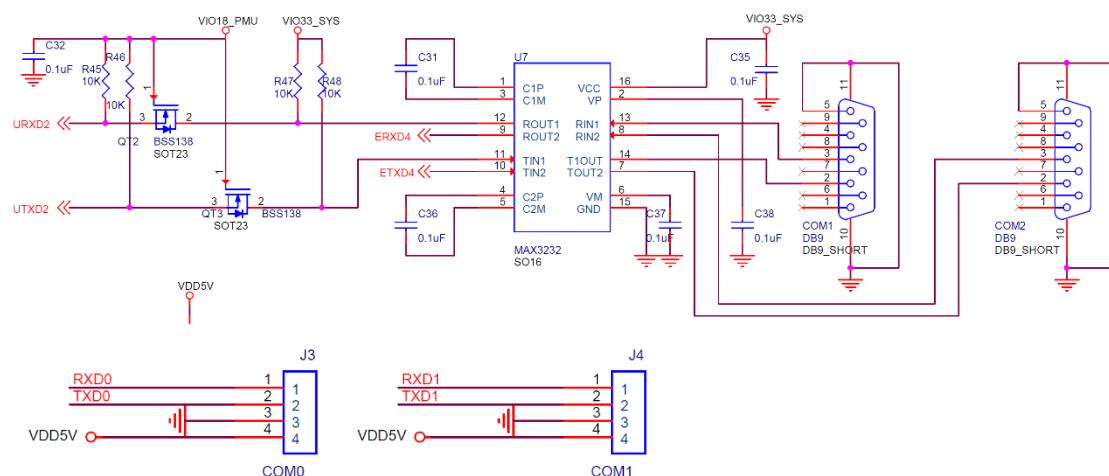

It requires an external circuit to provide 5.0V power to the VBUS pin.

OTG

#### 2.1.4 UART

The module provides 1-3 UARTs for serial communication and AT command input with external devices. For normal UART applications (non-Bluetooth), the maximum baud rate is 230400bps, and the high-speed baud rate of 4Mbps is only supported under Bluetooth 2.0 applications. The default baud rate is 115200bps. The module interface level is 1.8V. If the level of the interface with other external processors does not match, it is recommended to add a level shifting circuit.

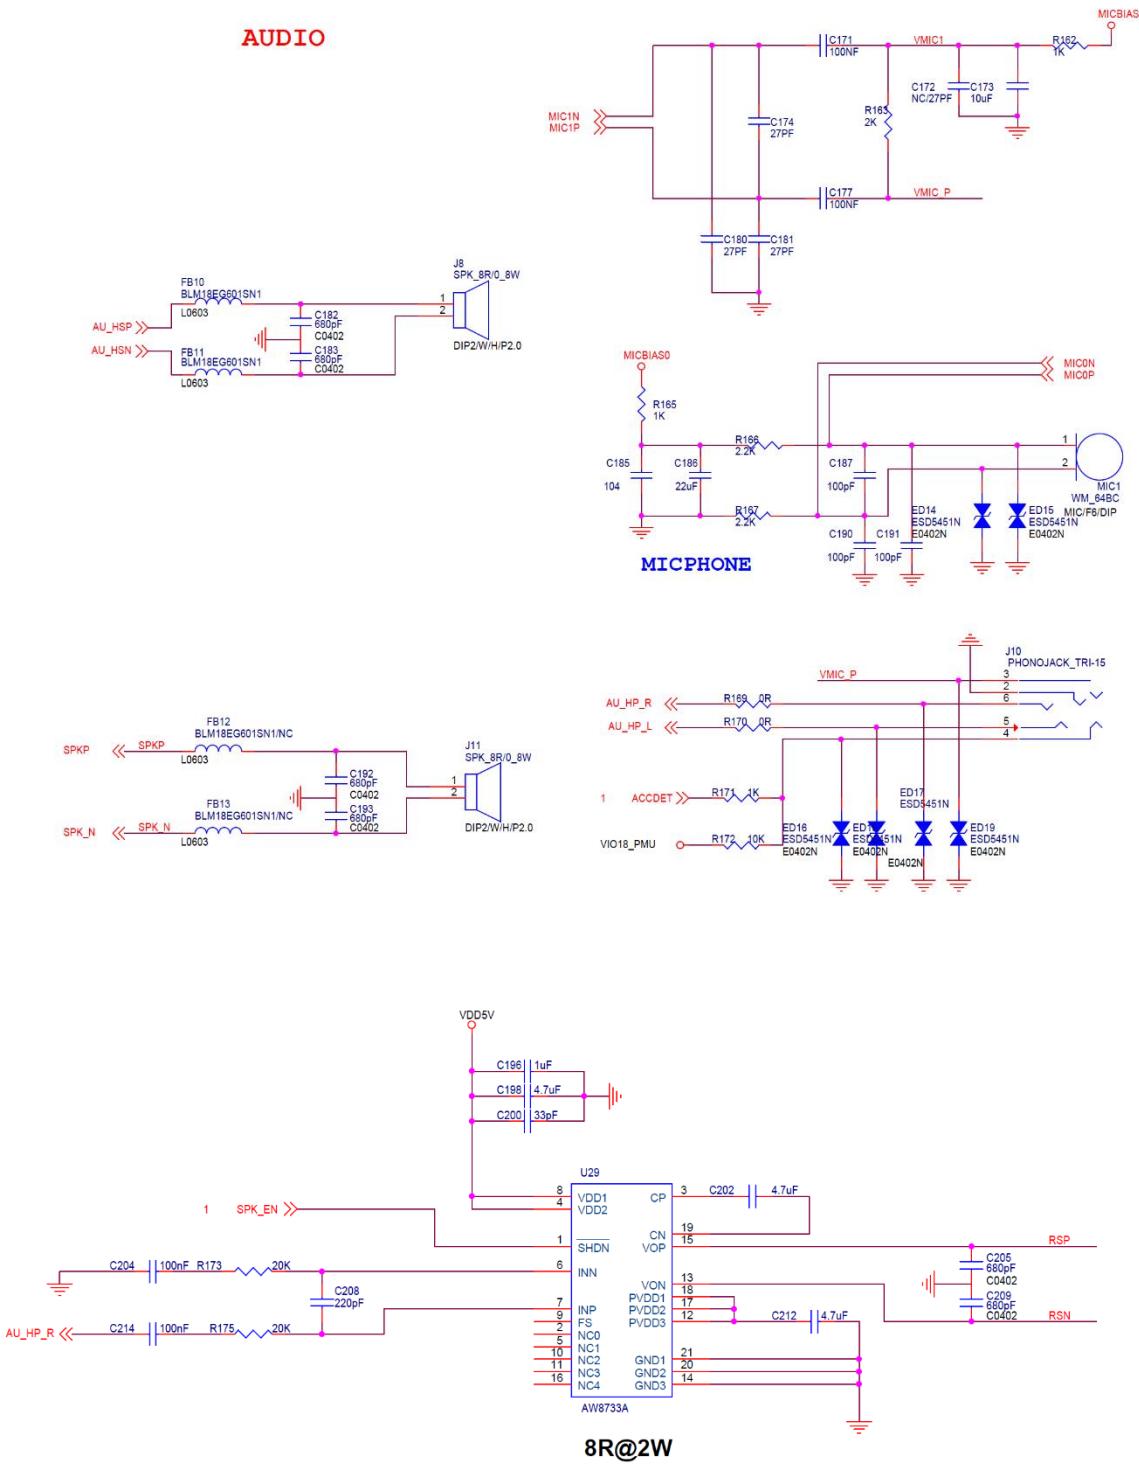

### **2.1.5 Audio, MIC, Speaker**

Support both iPhone and Nokia mode interfaces.

The module provides two onboard microphones. If only one onboard microphone is required, it must be

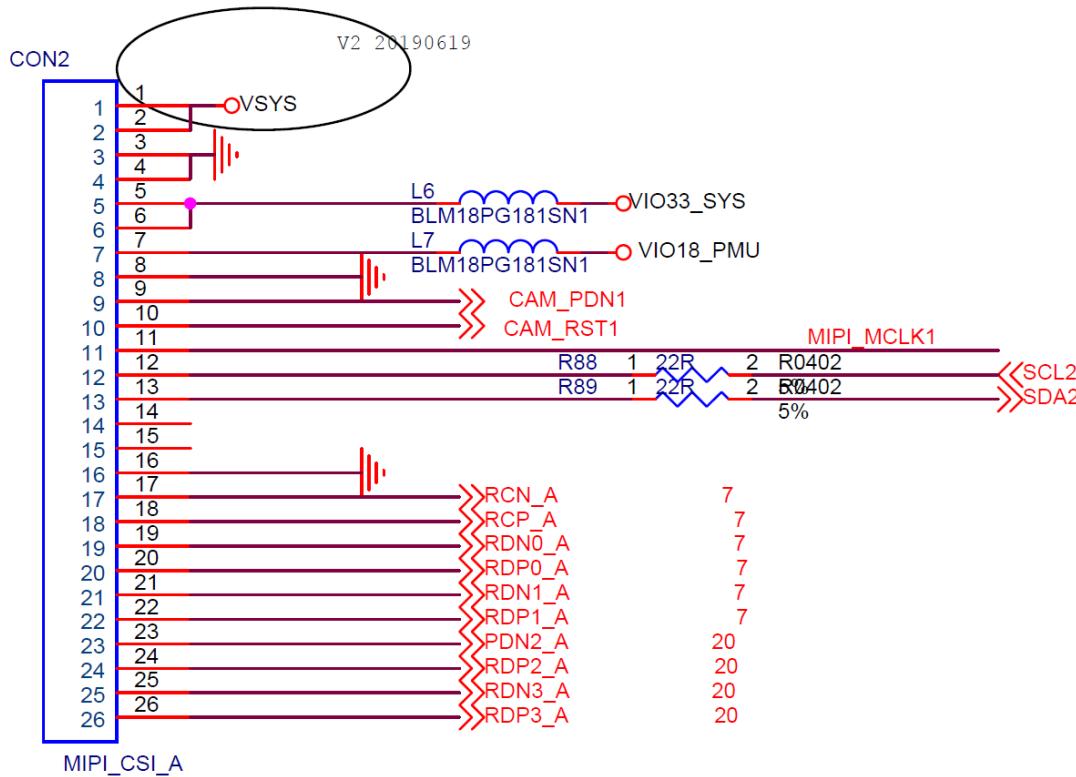

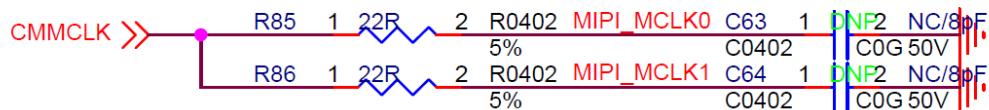

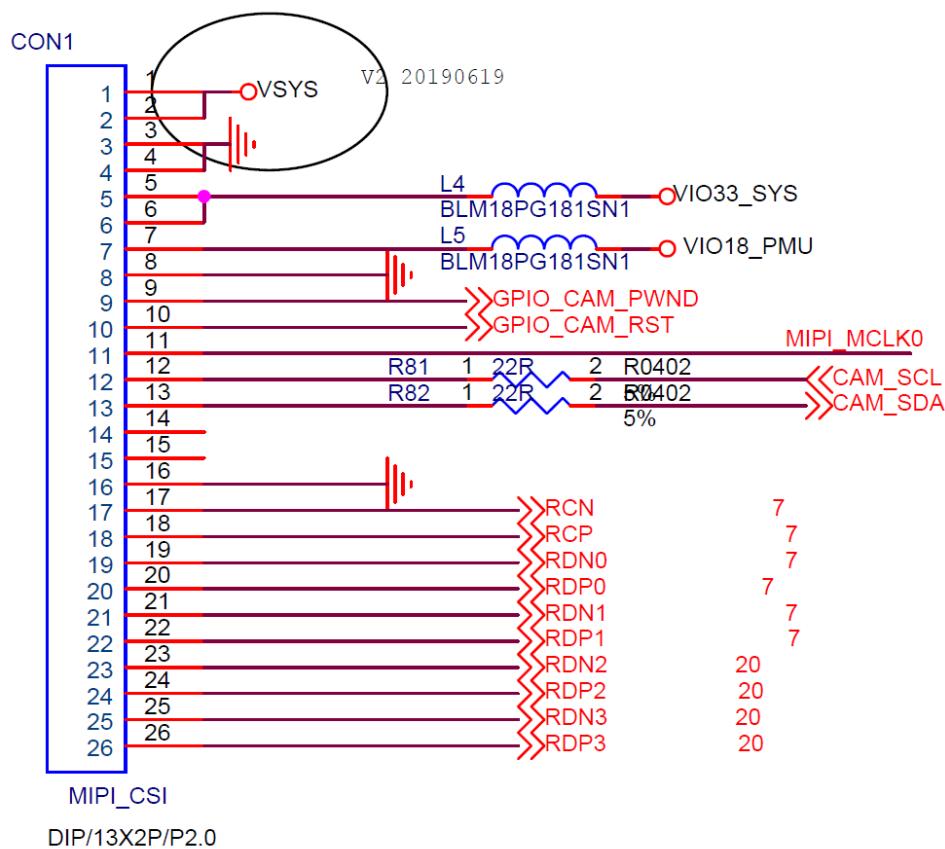

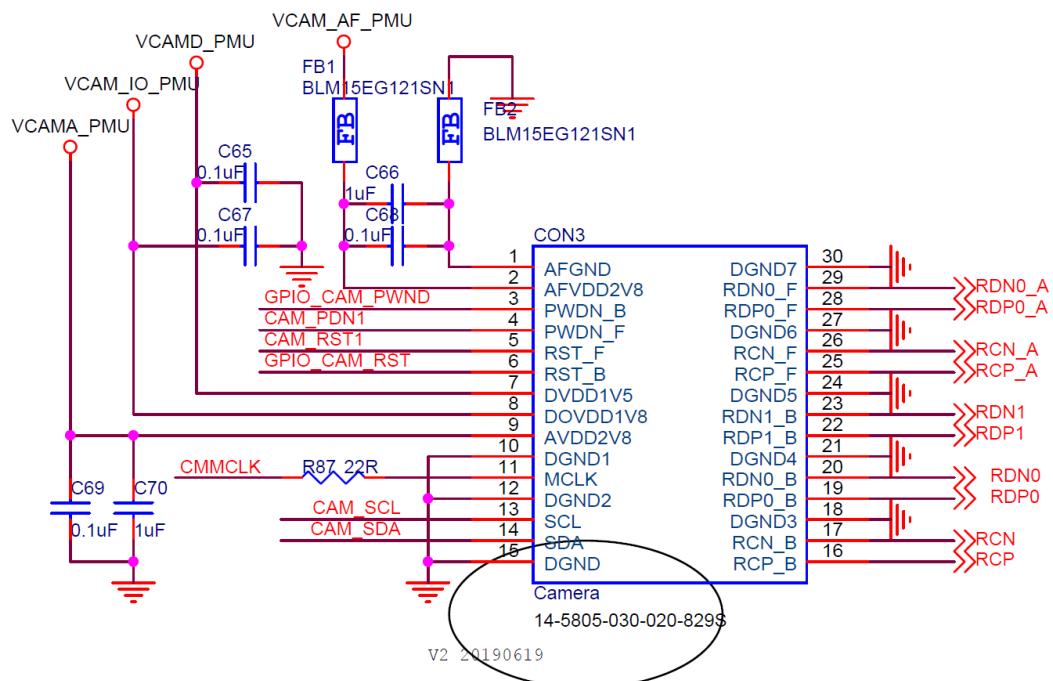

connected to the main microphone first.

## 2.1.6 Camera

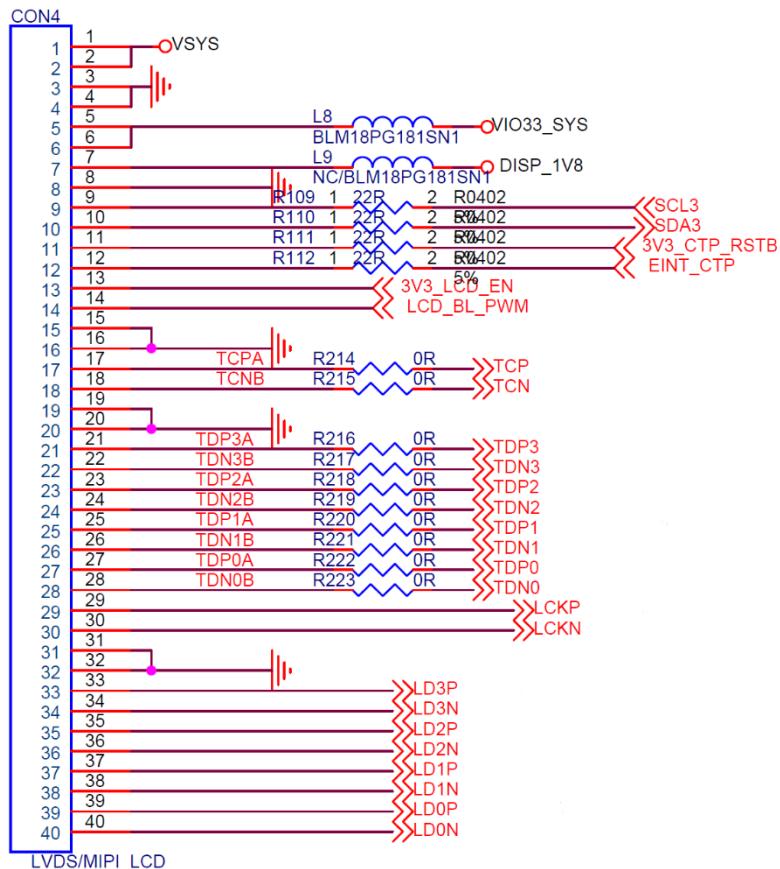

CM-MT6737 Supports MIPI CSI-2 high-speed camera serial interface with 4 data lane (for main) + 4 data lane (for sub). MT6737 equips a 13M camera ISP with advanced features e.g. auto focus, anti-handshake, auto sensor defect pixel correction, continuous video AF, face detection, burst shot, and panorama view.

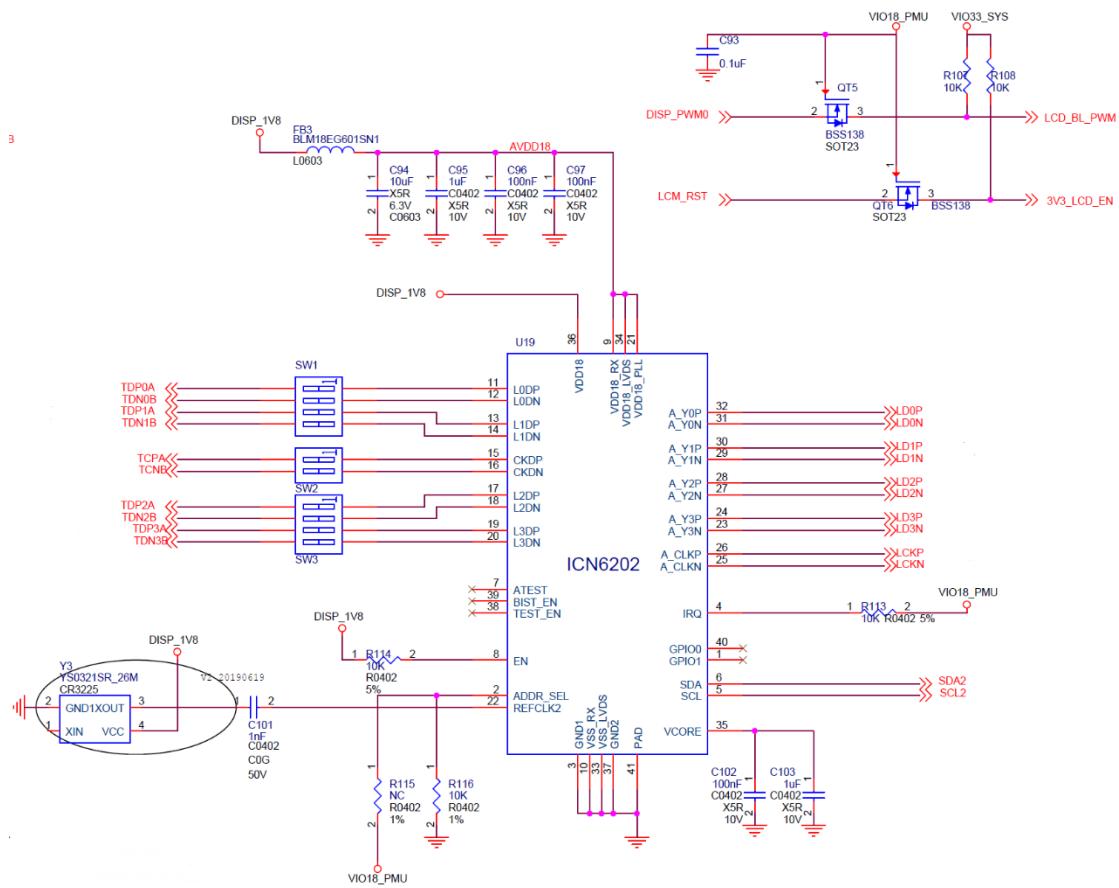

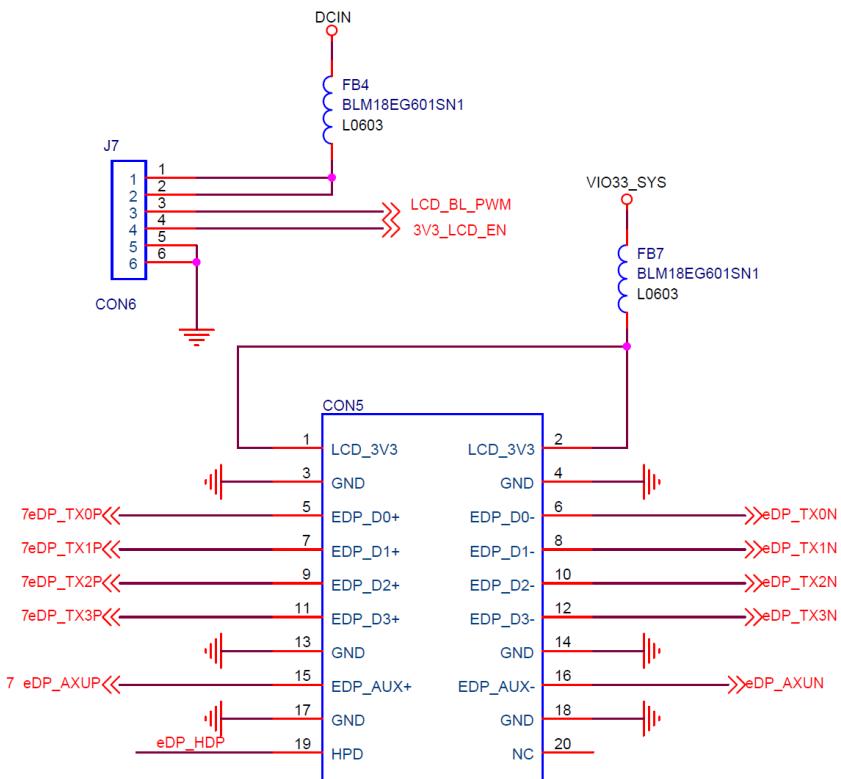

## 2.1.7 Display

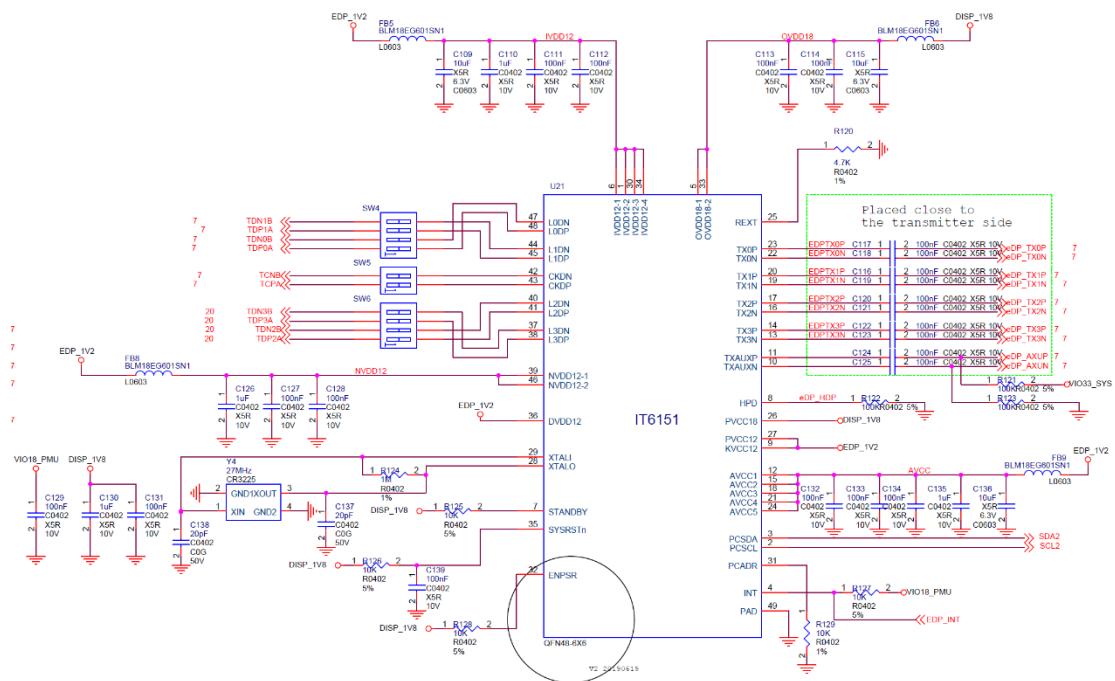

### MIPI to LVDS

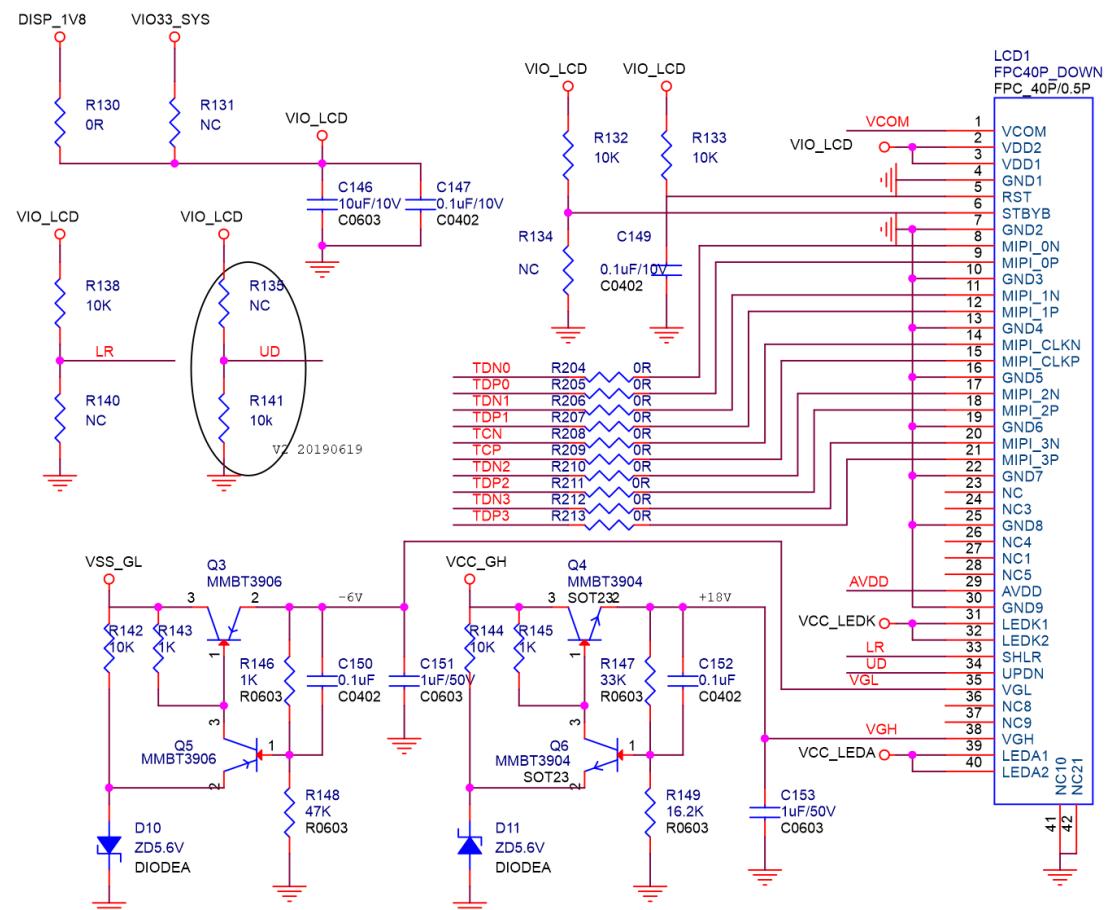

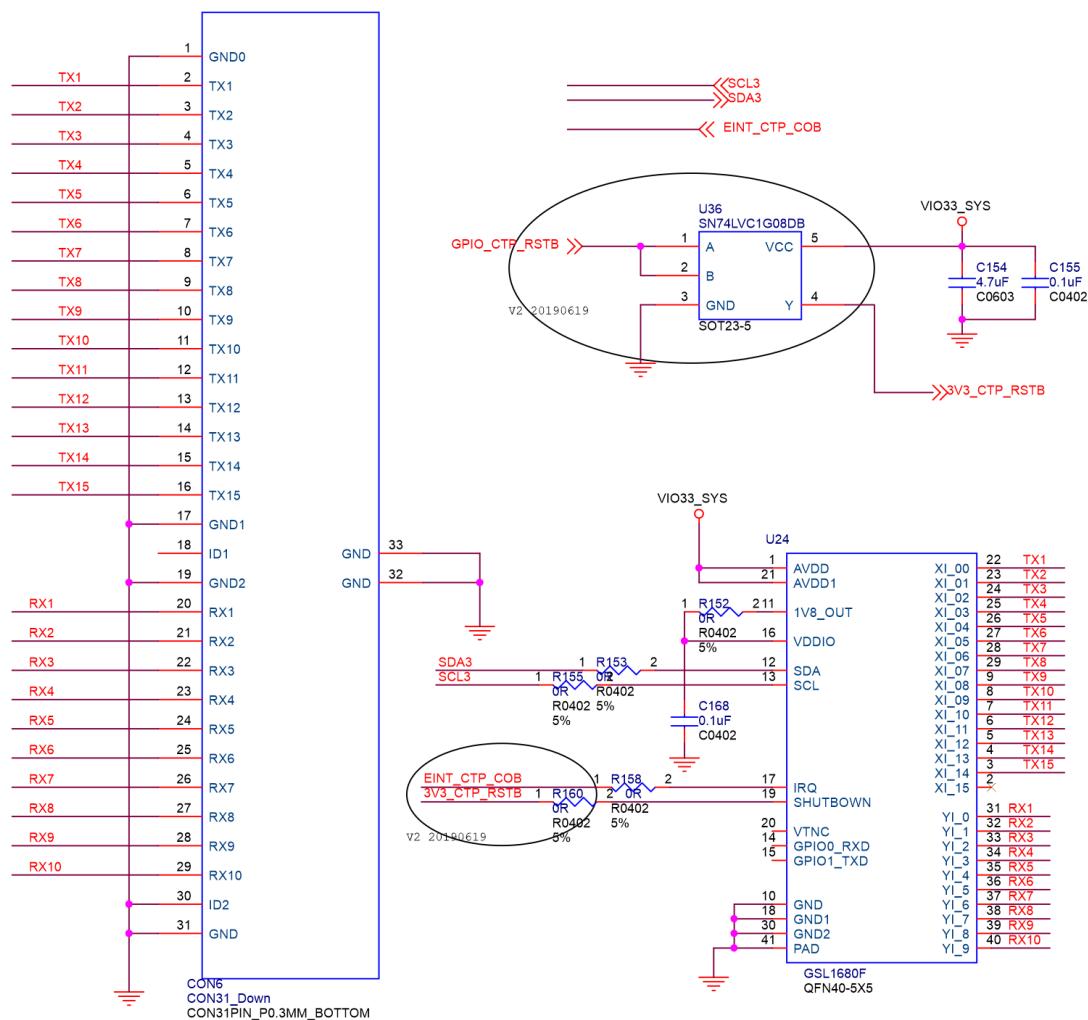

## MiPI to eDP

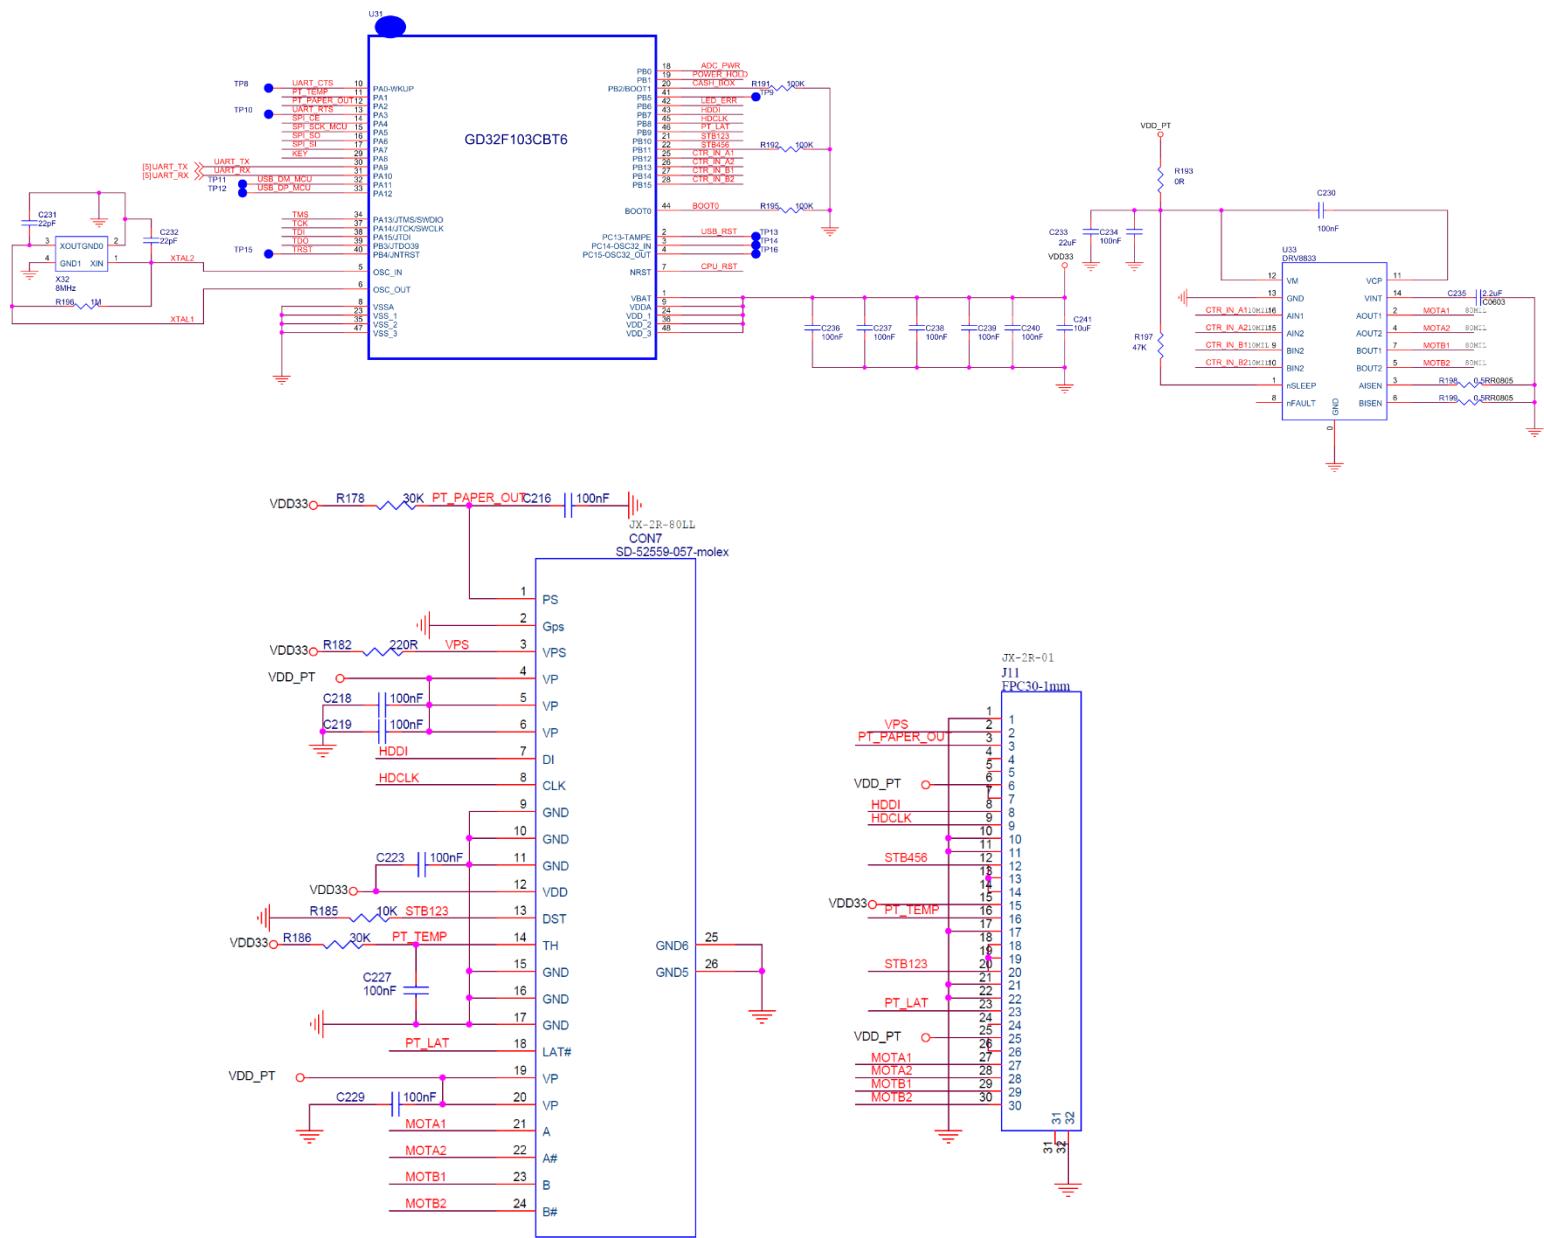

## MIPI Panel with Touch

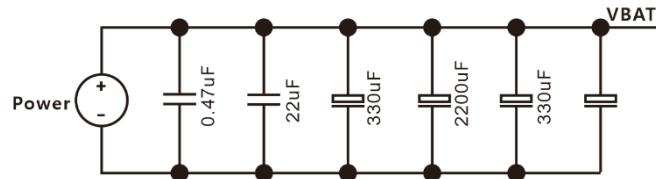

## 2.1.8 Printer

## 2.2 Power Supply Circuit Design

The system board power supply VBAT is required to have a power supply capacity of 2A or more to meet the peak current demand of the module.

## 2.3 RF Circuit Design

### 2.3.1 RF Technical Indicators

The test RF indicators shall be tested in strict accordance with the relevant 3GPP test specifications.

The WCDMA 2100/900 RF indicators meet the requirements of the 3GPP TS 34.121 protocol.

The GSM/GPRS/EDGE850/900/1800/1900 RF specifications meet the 3GPP TS 05.05 protocol requirements.

The CM-MT6737 supports AGPS, so the AGPS antenna is required. The design of the AGPS antenna is consistent with the main antenna, and its efficiency index is allowed to be reduced by 3 dB. The isolation between the main antenna and the diversity antenna is required to be greater than 12 dB. Antenna indicator requirements include passive and active indicators.

#### ✚ Passive indicator

The passive specifications of the antenna are different according to the different types of products.

Take the 3G tablet as an example

#### Primary antenna passive indicator (recommended)

Frequency Band	824-960MHz	1710-2170MHz
VSWR in Free Space	<3:1	<3:1
Peak Gain in Free Space	>0dBi	>0dBi
3-D Average Gain in Free Space	-3dBi	-3dBi
Antenna Efficiency	>50%	>50%

#### Diversity antenna passive indicator

Frequency Band	824-960MHz	1710-2170MHz
VSWR in Free Space	<3:1	<3:1
Secondary-to-Primary Antenna Isolation,  S21	< -10dB	< -10dB
Peak Gain Ratio of the Secondary to Primary Antenna	> -5dB	-5dB
3-D Average Gain Ratio of the Secondary to Primary Antenna	-5dB	-5dB

#### GPS antenna passive indicator

Frequency Band	1565.42MHz-1585.42MHz
VSWR in Free Space	<2:1
Secondary-to-Primary Antenna Isolation,  S21	< -20dB
Peak Gain Ratio of the Secondary to Primary Antenna	> 0dBi
3-D Average Gain Ratio of the Secondary to Primary Antenna	> -3dBi

#### ✚ Active indicator

Different products have different requirements for the active specifications of the antenna. Take 3G tablet as an example.

TRP: <W850/W1900/W2100>18dBm;

GSM850>27dBm, GSM900>27dBm;

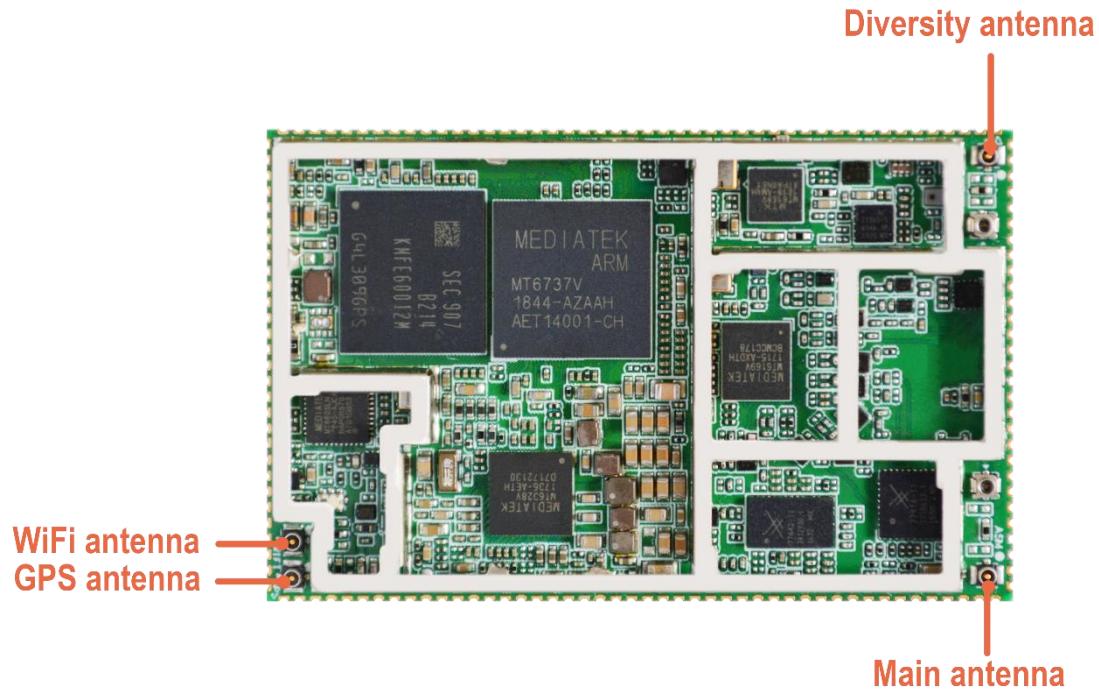

DCS1800>24dBm, PCS1900>24dBm>;

TIS: <W850<-100dBm; W1900/W2100<-103dBm;  
GSM850<-100dBm, GSM900<-100dBm;  
DCS1800/PCS1900<-102dBm.

### 2.3.2 RF Antenna Circuit Design

The RF antenna of CM-MT6737 has four interfaces: main antenna, diversity antenna, GPS antenna, WiFi antenna, and access mode is RF connector mode, RF connector is IPEX MHF4

## 3 Product Electrical Characteristics

### 3.1 Power Supply

The input voltage range is DC 3.7V~4.2V, and the typical value is 4.0V

Parameter	Min	Typ	Max
Input voltage	3.7V	4.0V	4.2V

### 3.2 Operating Current

The IDEL mode indicates the power consumption when there is no service, and the operating current range when there is data service under GSM / WCDMA.

Mode	Status	Average value	Remark
GSM	No service mode current	≤75mA	IDLE mode
	Data transmission current	≤660mA	GPRS/EDGE mode
WCDMA	No service mode current	≤75mA	IDLE mode
	Data transmission current	≤500mA	HSPA mode

### 3.3 Reliability Test

#### Temperature Test in Windless Environment

Mode	Ambient temperature	Voltage	Transmit power	Duration	Result
GPRS Class 10	+25 °C	(3.8±10%)V	Max	≥1hour	Pass
EDGE Class 12	+25 °C	(3.8±10%)V	Max	≥1hour	Pass
WCDMA	+25 °C	(3.8±10%)V	Max	≥1hour	Pass
