## Revision History

Ver	Description	Author	Date
V1.0	Initial version	Yang Jing	2019-11-19
V1.1	Modify testing	Zhou Lijun	2019-11-20

---

## 1. Introduction

### 1.1. About this Manual

This manual is intended to provide the user with an overview of the board and benefits, complete features specifications, and set up procedures. It contains important safety information as well.

### 1.2. Feedback and Update to this Manual

To help our customers make the most of our products, we are continually making additional and updated resources available on the Boardcon website ([www.boardcon.com](http://www.boardcon.com) , [www.armdesigner.com](http://www.armdesigner.com)).

These include manuals, application notes, programming examples, and updated software and hardware. Check in periodically to see what's new!

When we are prioritizing work on these updated resources, feedback from customers is the number one influence, If you have questions, comments, or concerns about your product or project, please no hesitate to contact us at [support@armdesigner.com](mailto:support@armdesigner.com).

### 1.3. Limited Warranty

Boardcon warrants this product to be free of defects in material and workmanship for a period of one year from date of buy. During this warranty period Boardcon will repair or replace the defective unit in accordance with the following process:

A copy of the original invoice must be included when returning the defective unit to Boardcon. This limited warranty does not cover damages resulting from lighting or other power surges, misuse, abuse, abnormal conditions of operation, or attempts to alter or modify the function of the product.

This warranty is limited to the repair or replacement of the defective unit. In no event shall Boardcon be liable or responsible for any loss or damages, including but not limited to any lost profits, incidental or consequential damages, loss of business, or anticipatory profits arising from the use or inability to use this product.

Repairs make after the expiration of the warranty period are subject to a repair charge and the cost of return shipping. Please contact Boardcon to arrange for any repair service and to obtain repair charge information.

# 1 EM-IMX8M-MINI Introduction

## 1.1 Summary

The EM-IMX8M-MINI SBC (single board computer) incorporates SOM-IMX8M-MINI SODIMM module which is based on NXP's energy efficient i.MX8M Mini ARM Cortex A53 and Cortex-M4 processor.

This i.MX8M SBC is tailor made for a wide range of multimedia applications, featuring 2GB LPDDR4, 8GB eMMC, 2 x USB 2.0, powerful network connectivity options including 4G, WiFi and Bluetooth. Robust multimedia features including 1080P60 video HEVC/H265/H264/VP9 decode with HDR, 2D/3D graphics acceleration, 16 audio channels (32bits), MIPI-DSI, and 1080p encoder and decoder. EM-IMX8M-MINI is ideal for Advanced graphics, machine vision, and other multimedia applications.

## 1.2 Processor Features

### CPU

- 4x Cortex-A53 core platforms up to 1.8GHz per core
- 32KB L1-I Cache/ 32 kB L1-D Cache
- 512 kB L2 Cache
- 1x Arm Cortex-M4 core up to 400MHz
- 16 kB L1-I Cache/ 16 kB L2-D Cache

### GPU

- 3D GPU (1x shader, OpenGL® ES 2.0)
- 2D GPU

### Video Engine

- 1080p60 VP9 Profile 0, 2 (10-bit) decoder, HEVC/H.265 decoder, AVC/H.264 Baseline, Main, High decoder, VP8 decoder
- 1080p60 AVC/H.264 encoder, VP8 encoder

### Camera

- 1x MIPI CSI (4-lane) with PHY

### Display

- Content can be display on 4-lane MIPI DSI display.

### Audio

- 5x SAI (12Tx + 16Rx external I2S lanes), 8ch PDM input

### Memory

- The external memory interfaces supported on this chip include:
  - 16/32-bit DRAM Interface:
  - LPDDR4-3000
  - DDR4-2400
  - DDR3L-1600

## 1.3 EM-IMX8M-MINI specifications

**Processor** – i.MX 8Quad, 4x ARM Cortex-A53 @1.8 GHz, 1 MB L2 cache, ARM Cortex-M4 @400 MHz

**GPU** – 2D/3D acceleration, support OpenGL ES 1.1, 2.0, OpenVG 1.1

**RAM** – 2GB LPDDR4

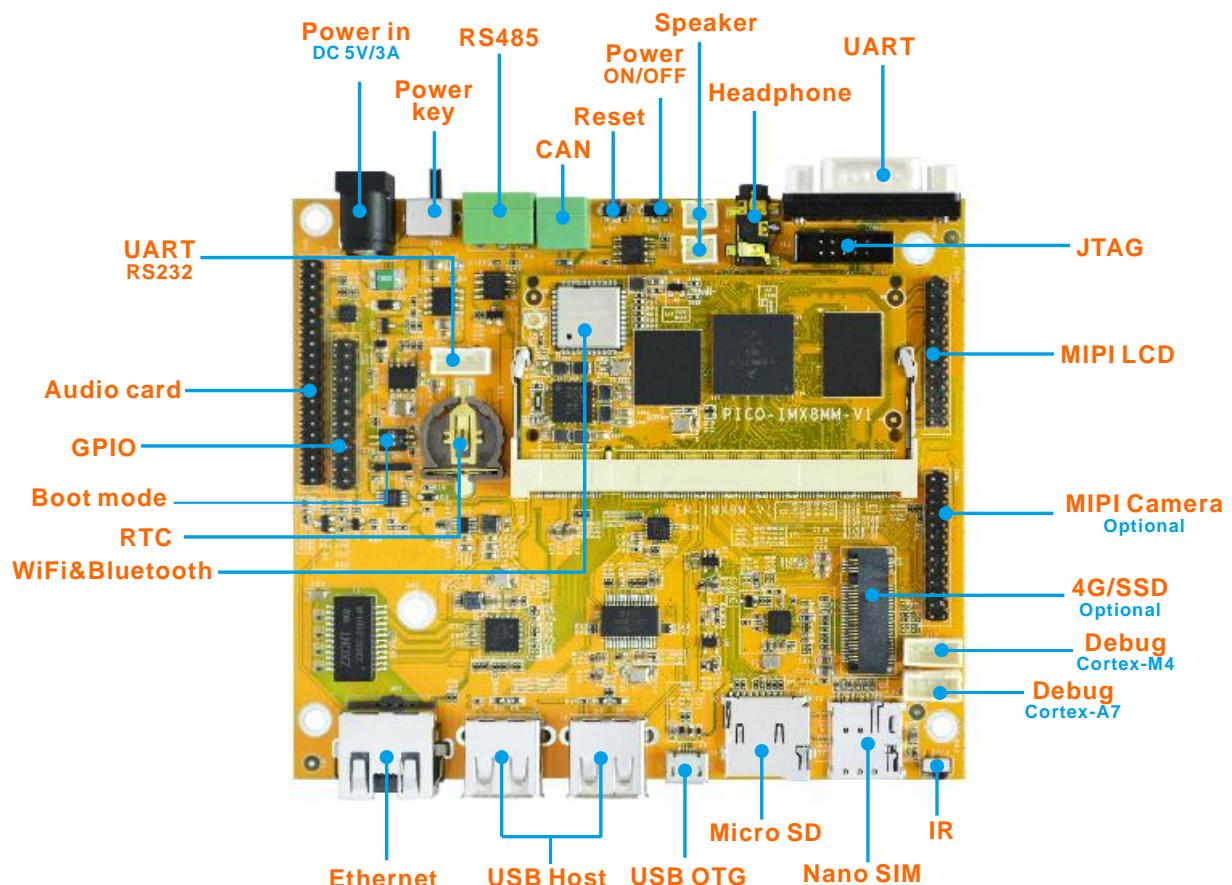

**Storage** – 8GB

**Interfaces** – Ethernet, 4x UART, IR, 2x USB Host, USB OTG, PCI-E, CAN, RS485, MIPI-LCD, Camera, GPIO, Audio I/O, SD, SIM, WIFI&Bluetooth, etc.

**Operating system** – Linux4.14.98

**Application** – Industrial control, communications and measurement, etc.

**Dimension** – Baseboard - 102.3mm x 118.6mm; CPU board - 67.6mm x 34.3 mm

## 2. Compiler Environment

### 2.1 Vmware10.0+ubuntu16.04

Install Vmware10.0 in windows OS, and then install ubuntu16.04 in VMware to compile. Please refer to the official website <http://www.ubuntu.com/> to download and install Ubuntu system.

**Note:** Linux should be complied by ubuntu 64-bit OS.

## 2.2 Install Tools

Copy the file: [Source\gcc-linaro-6.3.1\\_aarch64-linux-gnu.tar.bz2](#) to Ubuntu system, and unzip it:

```
$ tar xvf gcc-linaro-6.3.1_aarch64-linux-gnu.tar.bz2
```

```

### 3. Compile the Source

Source	Path
Compiler	Source\gcc-linaro-6.3.1_aarch64-linux-gnu.tar.bz2
Uboot	Source\u-boot-2018.03.tar.bz2
Kernel	Source\linux-4.14.98.tar.bz2
Rootfs	Source\rootfs.tar.bz2

#### 3.1 Compile Uboot

**Step 1**, unzip the source.

Copy [Source\u-boot-2018.03.tar.bz2](#) to ubuntu system and unzip.

```
$ tar xvf u-boot-2018.03.tar.bz2
```

```
192.168.0.21 - SecureCRT
File Edit View Options Transfer Script Tools Window Help
Enter host <Alt+R>
192.168.0.21 x 192.168.0.21 (1) serial-com4-115200 192.168.0.21 (2)
yangjing@boardcon:~/opt/imx8m-mini$ cd linux/
yangjing@boardcon:~/opt/imx8m-mini/linux$ ls
lib lib.tar.bz2 linux-4.14.98 rootfs u-boot-2018.03 u-boot-2018.03.tar.bz2
yangjing@boardcon:~/opt/imx8m-mini/linux$ tar xvf u-boot-2018.03.tar.bz2
```

**Step 2**, compile

```
$ cd u-boot-2018.03/
$ ./build_uboot.sh
```

```
192.168.0.21 - SecureCRT
File Edit View Options Transfer Script Tools Window Help
Enter host <Alt+R>
192.168.0.21 x 192.168.0.21 (1) serial-com4-115200 192.168.0.21 (2)
yangjing@boardcon:~/opt/imx8m-mini/linux$ ls
lib lib.tar.bz2 linux-4.14.98 rootfs u-boot-2018.03 u-boot-2018.03.tar.bz2
yangjing@boardcon:~/opt/imx8m-mini/linux$ cd u-boot-2018.03/
yangjing@boardcon:~/opt/imx8m-mini/linux/u-boot-2018.03$ ls
api doc lib spi
arch drivers Licenses SPL
board dts MAINTAINERS SPL.log
build_uboot.sh env Makefile System.map
cmd examples Makefile_bak test
common imx-mkimage post u-boot
config.mk include README u-boot.cfg

disk Kconfig snapshot.commit u-boot.dtb
yangjing@boardcon:~/opt/imx8m-mini/linux/u-boot-2018.03$ ./build_uboot.sh
```

After compiling, [imx-boot-imx8mmekv-sd.bin-flash\\_evk](#) are generated in the current directory.

#### 3.2 Compile Kernel

**Step 1**, unzip the source.

Copy [Source\linux-4.14.98.tar.bz2](#) to ubuntu system and unzip it.

```
$ tar xvf linux-4.14.98.tar.bz2
```

192.168.0.21 - SecureCRT

```
File Edit View Options Transfer Script Tools Window Help
Enter host <Alt+R> | 192.168.0.21 (1) | serial-com4-115200 | 192.168.0.21 (2)
yangjing@boardcon:~/opt/imx8m-mini/linux$ mv u-boot-2018.03.tar.bz2 linux-4.14.98.tar.bz2

certs include Makefile scripts vmlinux.o
COPYING init mm security
CREDITS ipc modules.builtin sound
yangjing@boardcon:~/opt/imx8m-mini/linux/linux-4.14.98$ ./build_kernel.sh
```

Ready ssh2: AES-256-CTR 11, 75 11 Rows, 89 Cols VT100 CAP NUM

After compiling, **Image** and **fsl-imx8mm-evk.dtb** are generated in the directory

*linux-4.14.98\arch\arm64\boot*

### 3.3 Compile rootfs

The root file system not need to compile, only compression or decompression. If want to add files to the rootfs file system, just copy [Source\rootfs.tar.bz2](#) to ubuntu system and unzip it:

```
$ mkdir rootfs
$ cd rootfs      (Copy Source\rootfs.tar.bz2 to currently directory)
$ tar xvf rootfs.tar.bz2
```

A screenshot of the SecureCRT application window titled "192.168.0.21 - SecureCRT". The terminal session shows the following commands being run on a Linux system (imx8m-mini):

```
bak lib lib.tar.bz2 linux-4.14.98 u-boot 2018.02
yangjing@boardcon:~/opt/imx8m-mini/linux$ mkdir rootfs
yangjing@boardcon:~/opt/imx8m-mini/linux$ cd rootfs/
yangjing@boardcon:~/opt/imx8m-mini/linux/rootfs$ ls
rootfs.tar.bz2
yangjing@boardcon:~/opt/imx8m-mini/linux/rootfs$ tar xvf rootfs.tar.bz2
```

```
$ rm rootfs.tar.bz2          (delete the old file system)
$ tar cvfj rootfs.tar.bz2 *  (" * " means all of the current directory files)
```

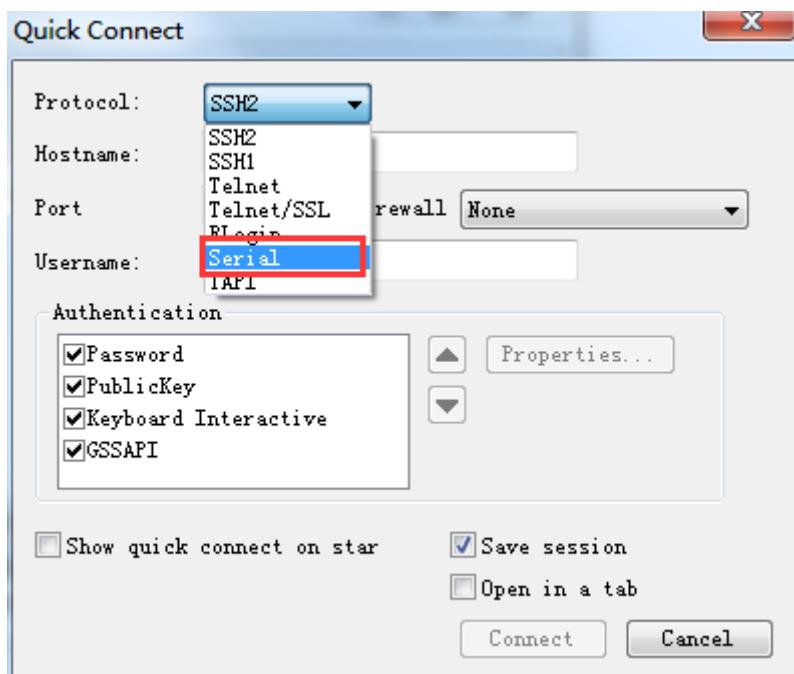

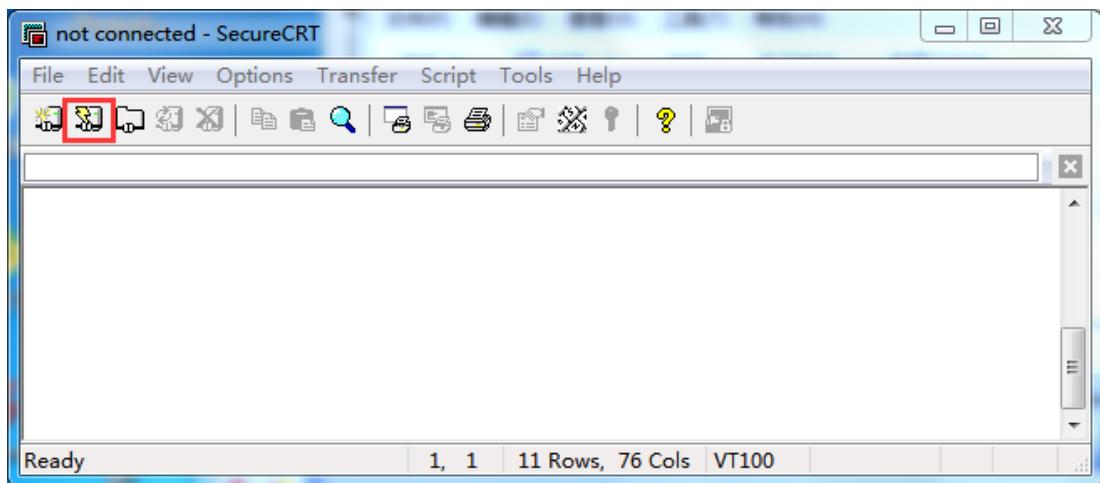

A screenshot of the SecureCRT application window titled "192.168.0.21 - SecureCRT". The terminal session shows the following commands being run on a Linux system (imx8m-mini):

```
./etc/terminfo/v/vt100
yangjing@boardcon:~/opt/imx8m-mini/linux/rootfs$ ls
bin dev home media opt rootfs.tar.bz2 sbin tmp usr
boot etc lib mnt proc run sys unit tests var
yangjing@boardcon:~/opt/imx8m-mini/linux/rootfs$ rm rootfs.tar.bz2
yangjing@boardcon:~/opt/imx8m-mini/linux/rootfs$ tar cvfj rootfs.tar.bz2 *
```

## 4 Install Serial Terminal Tool

The serial terminal SecureCRT is used for debugging. It can be used directly after decompression.

Open SecureCRT.exe after copy to PC (path: [tools\windows\SecureCRT.exe](#)), then click the icon **Quick Connect** to config.

Set the parameters as follow:

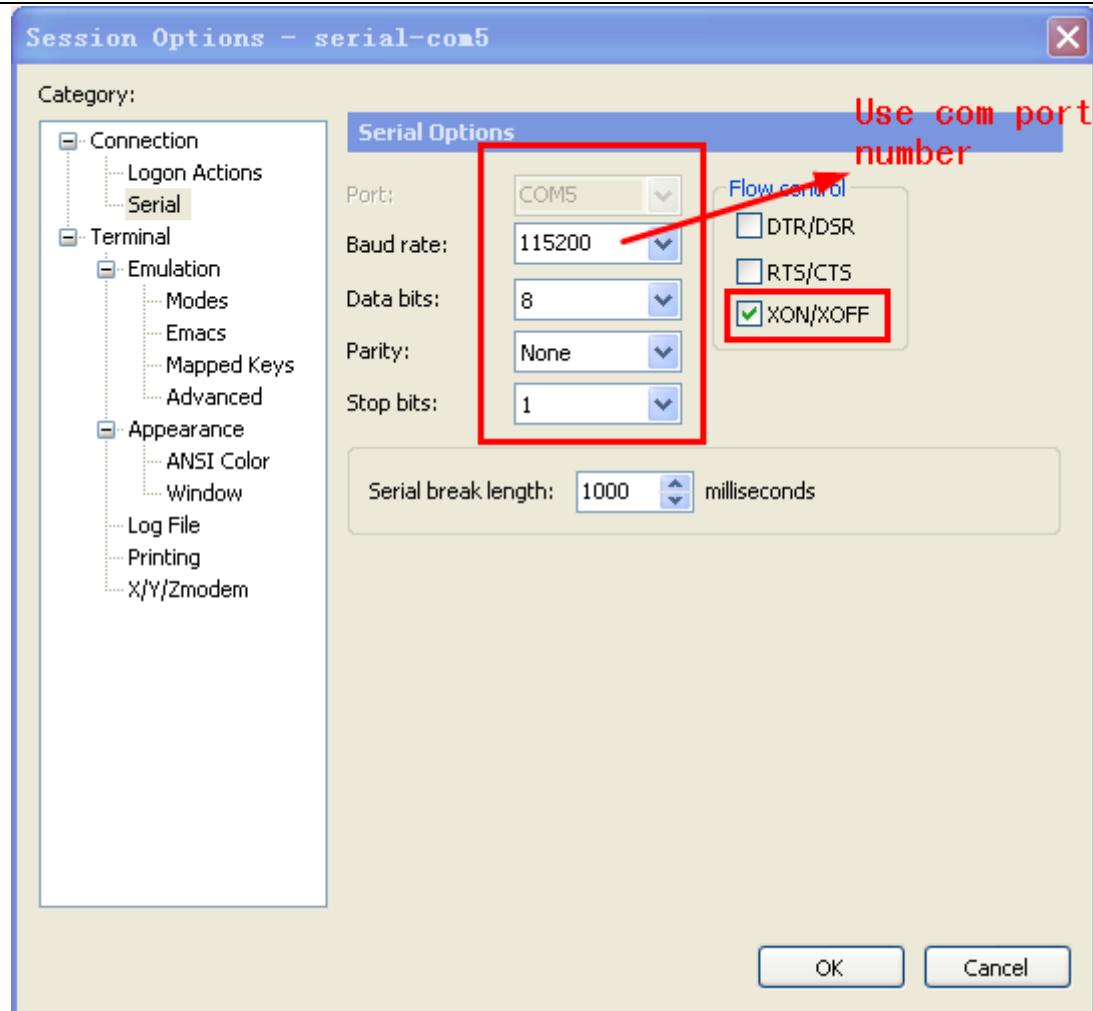

**Protocol:** Serial

**Port:** To be specified by user PC

**Baud rate:** 115200

**Please check XON/XOFF but not RTS/CTS**

Check Save session

After all, click **connect**

**Illusion1:** If open more than one serial terminal tools, and they use the same serial port, there will be reported **the port is busy**.

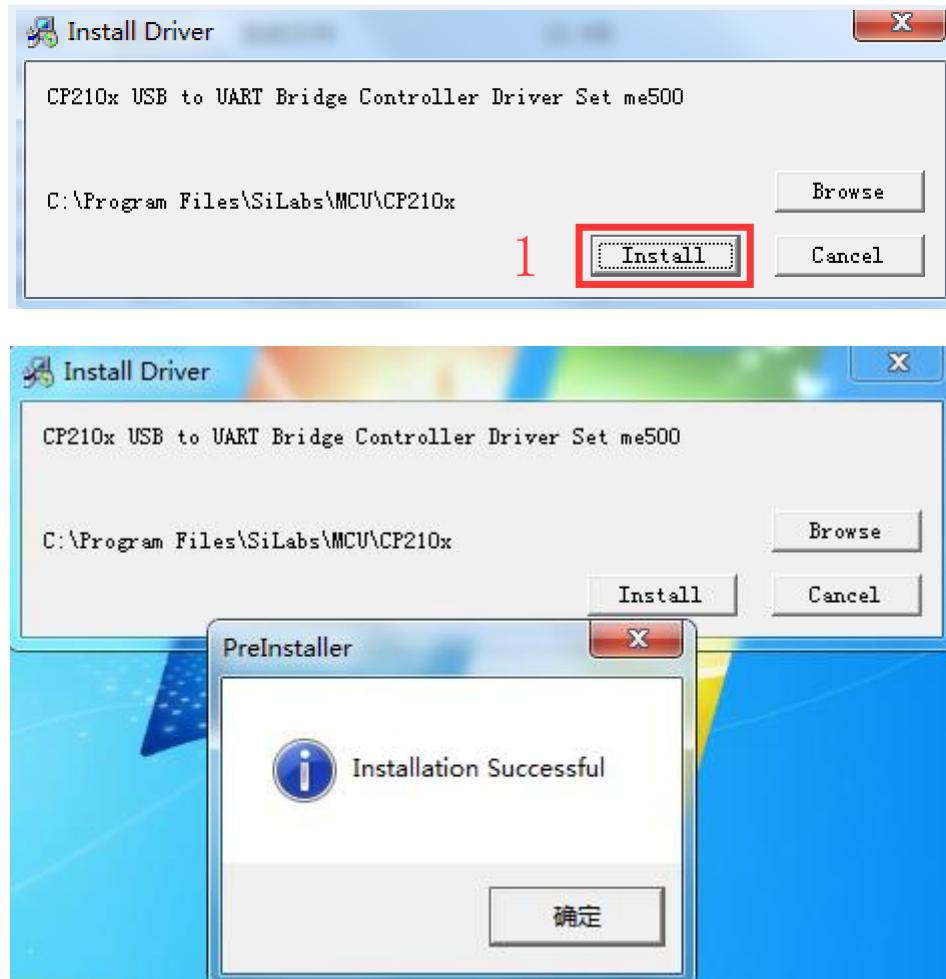

**Solution:** Turn off the serial tool that unnecessary.

## 5. Burning Guide

### 5.1 Install Driver

Install **CP2102 driver**.

Plug the **USB-to-UART cable CP2102** to the PC, unzip **CP2102WIN7.rar** on Windows, then click **preInstaller.exe** to install

Now the device will be listed under **Device Manager -> PORTS** with unique serial port assigned

COM Port: CP210x USB to UART Bridge Controller (COM5)

## 5.2 Burn image to eMMC via USB

Step 1, Set switch to download mode (SW4: OFF OFF).

SW4 Boot Mode	1	2	= ON
Download	OFF	OFF	
eMMC Boot	ON	ON	

Default set **eMMC** as normal start mode.

Step 2, Copy **images** to Windows PC. Open **Command Prompt**.

```

Step 3, Connect development board to PC with USB OTG cable and serial cable, then power on(5V).

Step 4, Execute follow command in Command Prompt start to download:

uuu imx8mm\_emmc\_all.uuu (download uboot, kernel, rootfs.tar.bz2)

or

uuu imx8mm\_emmc\_all\_qt5.uuu (download uboot, kernel, rootfs-qt5.tar.bz2)

or

uuu imx8mm\_emmc\_kernel.uuu (download uboot and kernel)

#### Note

The **uuu** only can be used in **windows 10**. Please download the images in windows 10 system.

```

Or execute follow command to set static IP.

```
# ifconfig eth0 192.168.1.189 up  
# route add default gw 192.168.1.1 dev eth0  
# ping www.boardcon.com
```

## 6.9 CAN

Connect CAN ports of Board A and Board B with the test line.

For Board A, execute the follow commands at **Serial terminal A** to set CAN A as Receiver.

For Board B, execute the following commands at **Serial terminal B** to set CAN\_B as Transmitter.

```
# ip link set can0 up type can bitrate 125000      (start CAN0)
# cansend can0 123#DEADBEEF      (CAN0 send characters 0xDE 0xAD 0xBE 0xEF)
```

The Transmitter and receiver can be converted by execute the command

```
# candump can0
```

or

```
# cansend can0 123#DEADBEEF
```

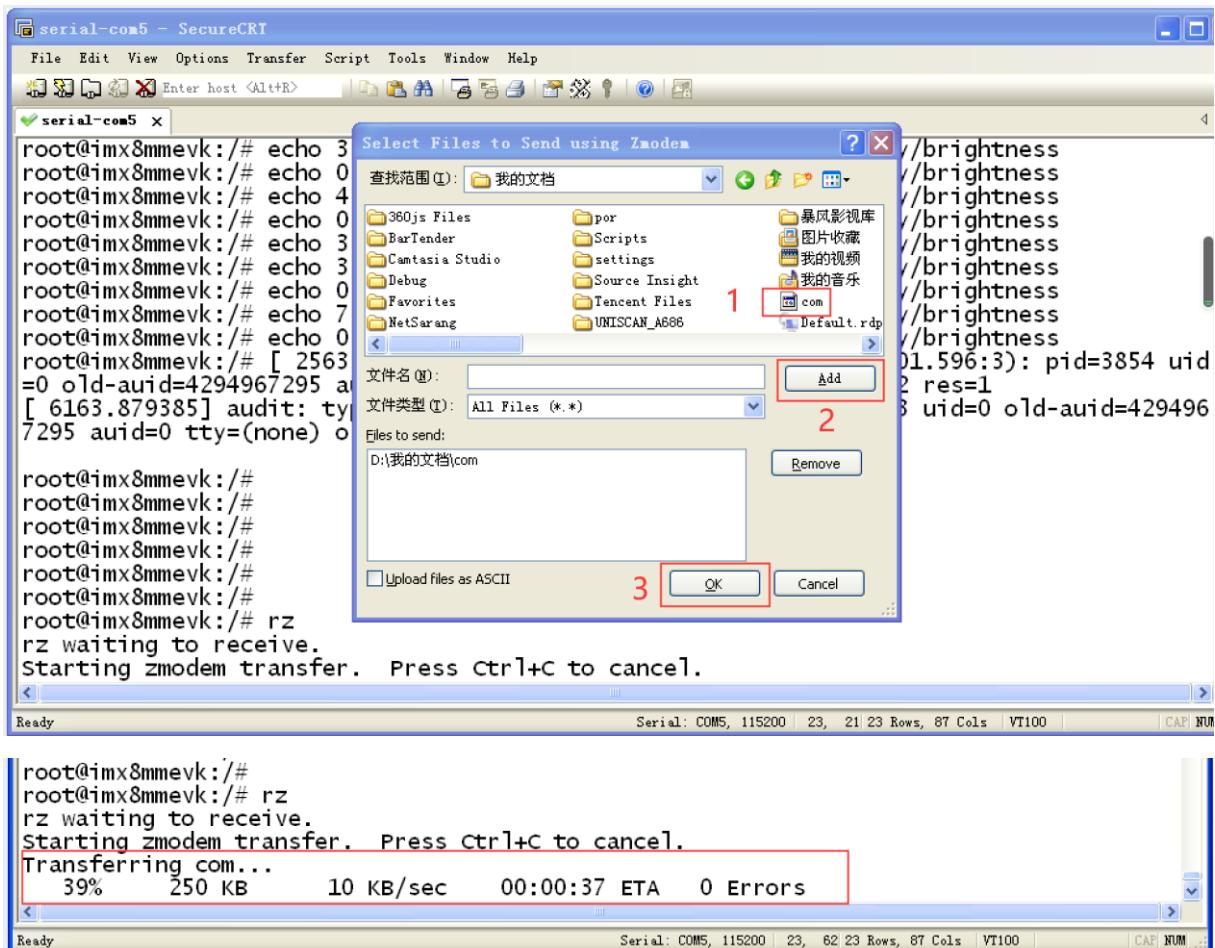

## 6.10 RS485

Connect the RS485 ports of Board A and B with the test line.

For Board A, execute the follow commands at **Serial terminal A** to set RS485 as Receiver.

# rz  
(send "com" file)

```
# chmod 777 com
# echo 0x03 0x00 > /sys/class/leds/aw9110_led/reg    (Set as Receiver)
# ./com /dev/ttyUSB0 115200 8 0 1
```

```

The Transmitter and receiver can be converted by execute the command

```
# echo 0x03 0x00 > /sys/class/leds/aw9110_led/reg      (Set as Receiver)
```

```
# ./com /dev/ttyUSB0 115200 8 0 1
```

or

```
# echo 0x03 0x01 > /sys/class/leds/aw9110_led/reg      (Set as Transmitter)
# ./com /dev/ttyUSB0 115200 8 0 1
```

## 6.11 UART(J14, COM1)

Connect RX&TX (PIN2&3 of J14/COM1), then execute the commands to run the test program at serial terminal.

```
# ./com /dev/ttyUSB1 115200 8 0 1
# ./com /dev/ttymxc2 115200 8 0 1
```

The screenshot shows the SecureCRT application window titled "serial-com5 - SecureCRT". The terminal session is connected to "serial-com5". The command line shows the configuration of two serial ports:

```
root@imx8mmevk:/# chmod 777 com
root@imx8mmevk:/# echo 0x03 0x00 > /sys/class/leds/aw9110_led/reg
root@imx8mmevk:/# ./com /dev/ttyUSB0 115200 8 0 1
port = /dev/ttyUSB0
baudrate = 115200
cs = 8
parity = 0
stopb = 1
^C
root@imx8mmevk:/# ./com /dev/ttyUSB1 115200 8 0 1
port = /dev/ttyUSB1
baudrate = 115200
cs = 8
parity = 0
stopb = 1

```

A red box highlights the received data "GDSJGHKHJLJK;" and "RECV: GDSJGHKHJLJK;".

The screenshot shows the SecureCRT application window titled "serial-com5 - SecureCRT". The terminal session is connected to "serial-com5". The command line shows the configuration of a serial port:

```
root@imx8mmevk:/# ./com /dev/ttymxc2 115200 8 0 1
port = /dev/ttymxc2
baudrate = 115200
cs = 8
parity = 0
stopb = 1
